A38 SHIP VISUAL RIDER 2026

The projection options available for A38 are not included in the basic services of A38, therefore, if required, separate consultation with the designated program production team is necessary.

1. PROJECTION OF THE FRONT OF THE PA

Two 1,7m x 1,4m screens on both sides of the stage, two BenQ MH550 (3500 ANSI) projectors

1/a. We can display previously sent MP4 or PNG logos (with 1920x1080p resolution) from our server (max 2GB). Both screens will display the same image.

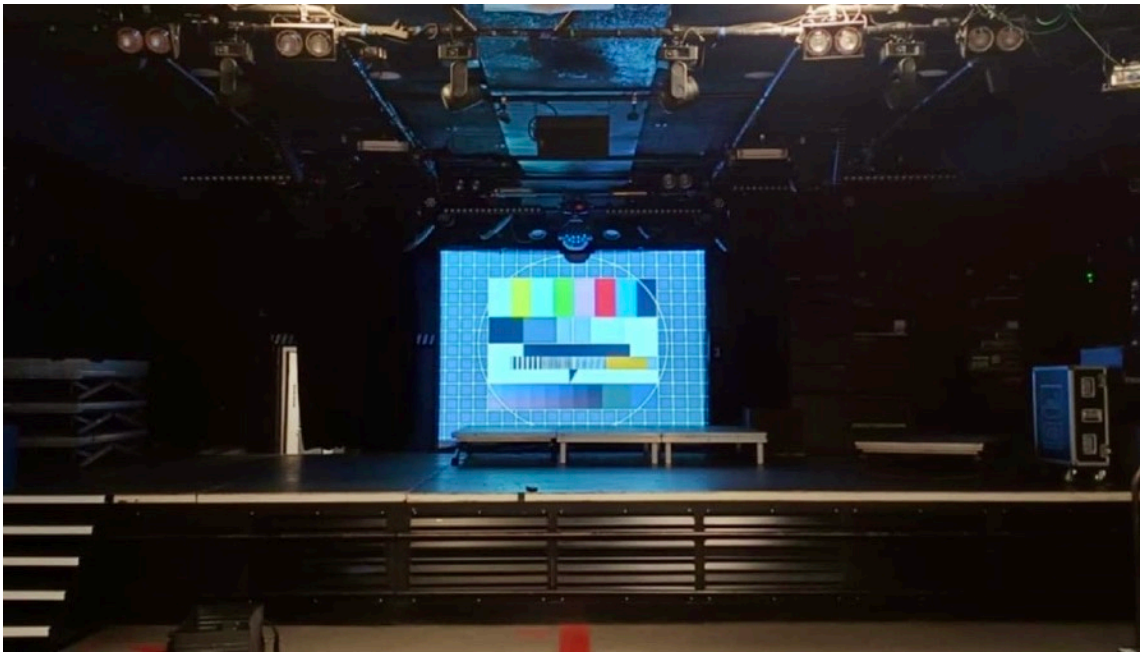
We can provide this free of charge if the files are sent at least five days before the start of the program.

1/b. If a visual artist uses their own laptop for projection as part of the production, a charge will apply for the projection service, which includes the fee for one video technician. If the laptop has two HDMI outputs, separate projections can displayed on the screens.

2. STAGE PROJECTION

One 3m x 1,7m front screen, One Hitachi CPWX8265 projector (6000 ANSI),

1920x1080p resolution via HDMI input, one video technician included.

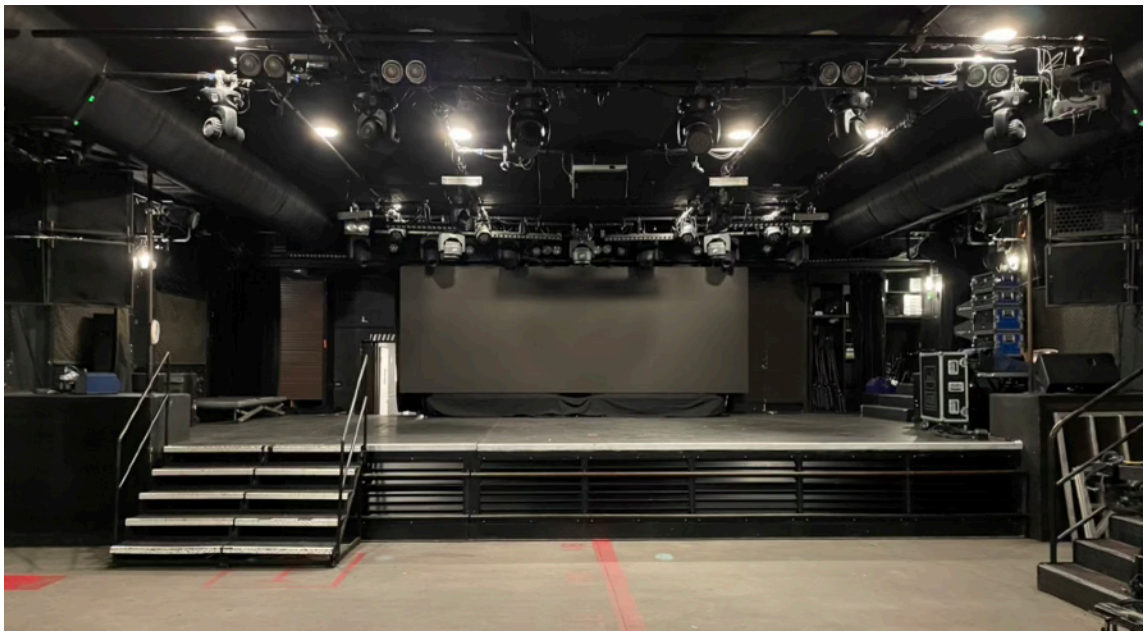


3. LED WALL:

One 5,5m x 2m LED wall, built on a 30cm high riser, positioned centrally at the rear of the stage

P2.5 RD2 indoor LED wall, NovaStar VX1000 processor.

2200x800 pixel resolution via HDMI or SDI input, one video technician included.



When using the LED wall, the front of the PA projection system can also be used simultaneously. In this configuration, the same image will be displayed on both of the two PA screens.
